Free radon test kits offered

Butler County plans to send 200 free radon testing kits to low-income clients who participated in one of five homeowner programs sponsored by Butler County Community Development last year. Radon is an odorless, radioactive gas that occurs naturally in soil. In elevated levels, radon gas can cause lung cancer. For information about radon gas assistance, call Donna Everson at Butler County Community Development, 513-785-5391, or go to www.butlercountydes.org.
